Project name: **Employee Attrition/Quit prediction**

The employee resigns based on age, salary, performance, role etc. These are employee attributes.
The outcomes or categories indicate whether resigned within a certain time frame. For example employees could be labelled to resign within 30 days or not resign within 30 days.

3 stages -> 1. Machine learning, 2. Supervised learning 3.classification

Data set

Age	Salary	Performance	Late hours	Attendance Record	Whether employee had a promotion in the past two years	Role	Output(within 30days or more than 30 days)

Inputs

Output(Classification)
